技术规格

Background:	This gene encodes an integral outer mitochondrial membrane protein that blocks the apoptotic death of some cells such as lymphocytes. Constitutive expression of BCL2, such as in the case of translocation of BCL2 to Ig heavy chain locus, is thought to be the cause of follicular lymphoma. Two transcript variants, produced by alternate splicing, differ in their C-terminal ends.
Applications:	WB
Name of antibody:	BCL2(Phospho-Thr69)
Immunogen:	Peptide sequence around phosphorylation site of Threonine 69 (A-R-T(p)-S-P) derived from Human BCL-2.
Full name:	B-cell CLL/lymphoma 2
Synonyms :	Bcl-2; PPP1R50

SwissProt:	P10415
WB Predicted band size:	26 kDa
WB Positive control:	Hela cells lysates
WB Recommended dilution:	500-1000
