

SPCS2 抗原（重组蛋白）

中文名称： SPCS2 抗原（重组蛋白）

英文名称： SPCS2 Antigen (Recombinant Protein)

别名： signal peptidase complex subunit 2

相关类别： 抗原

储存： 冷冻（-20℃）

概述

Fusion protein corresponding to a region derived from 104-226 amino acids of human SPCS2

技术规格

Full name:	signal peptidase complex subunit 2
Swissprot:	Q15005
Gene Accession:	BC082231
Purity:	>85%, as determined by Coomassie blue stained SDS-PAGE
Expression system:	Escherichia coli
Tags:	His tag C-Terminus, GST tag N-Terminus
Background:	SPCS2 (signal peptidase complex subunit 2), also known as SPC2 5 or microsomal signal peptidase 25 kDa subunit, is a 226 amino acid multi-pass membrane protein that localizes to both the microsome and the endoplasmic reticulum (ER), and belongs to the SPCS (signal peptidase complex subunit) family. Existing as a component of the microsomal signal peptidase complex which consists of five members, SPCS2 removes signal peptides from nascent proteins as they are translocated into the lumen of the ER. The gene encoding SPCS2 is located on human chromosome 11, which houses over 1,400 genes and comprises nearly 4% of t

he human genome.
