技术规格

Background:	This gene encodes a protein that belongs to a family of a poptotic suppressor proteins. Members of this family share a conserved motif termed, baculovirus IAP repeat, which is necessary for their anti-apoptotic function. This protein functions through binding to tumor necrosis factor receptor-associated factors TRAF1 and TRAF2 and inhibits apoptosis induced by menadione, a potent inducer of free radicals, and interleukin 1-beta converting enzyme.
Applications:	WB
Name of antibody:	XIAP(Phospho-Ser87)
Immunogen:	Peptide sequence around phosphorylation site of serine87(K-V-S(p)-P-N) derived from Human XIAP .
Full name:	X-linked inhibitor of apoptosis

Synonyms :	API3; ILP1; MIHA; XLP2; BIRC4; IAP-3; hIAP3; hIAP-3
SwissProt:	P98170
WB Predicted band size:	57 kDa
WB Positive control:	HepG2 cells lysates treated with Anisomycin
WB Recommended dilution:	500-1000
