

## HRP 标记的兔抗鸡 IgG

中文名称: HRP 标记的兔抗鸡 IgG

英文名称: HRP-conjugated Rabbit anti-chicken IgG

相关类别: HRP 标记二抗

储 存: 冷冻 (-20℃)

标 记 物: HRP

### 技术规格

<b>Background</b>	Immunoglobulin G ( IgG ) ,is one of the most abundant proteins in serum with normal levels between 9.5-12.5 mg/ml in adult blood. I gG is important for our defence against microorganisms and the m olecules are produced by B lymphocytes as a part of our adaptive immune response. The IgG molecule has two separate functions; to bind to the pathogen that elicited the response and to recruit othe r cells and molecules to destroy the antigen. The variability of the IgG pool is generated by Somatic recombination and the number o f specificities in an individual at a given time point is estimated to be 1011 variants.
<b>Applications</b>	1/1000-5000 for ELISA 1/1000-5000 for Western blotting 1/200-500 for Immunohistochemistry/cytochemistry
